    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          B B

       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          贸업

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ~
```

The invention relates to determining an expression level of an ILM receptor (macrophage surface receptor), comprises determining the level of an ILM receptor expressed in a macrophage. Also included are a method of determining whether a substance is an activator or an inhibitor of an ILM receptor, involving applying the substance to a test system which generates a measurable read-out upon modulation of the ILM receptor or an ILM receptor function, a test system for determining whether a substance

macrophage.

Determining an expression level of ILM (a macrophage surface receptor), for the diagnosis or monitoring of chronic inflammatory airway disease, comprises determining the level of the ILM receptor expressed in a

```
is an activator or an inhibitor of an ILM receptor function, characterised in that the receptor is involved in a chronic inflammatory airway disease and where the receptor plays a role in mediating inflammation comprising: (i) an ILM receptor; (ii) an expression vector capable of expressing an ILM receptor in a cell; or (iii) a host cell transformed with an expression vector capable of expressing the ILM receptor and a substance determined to be an activator or inhibitor of an ILM receptor. The methods are useful for the diagnosis or monitoring of a cironic inflammatory disease, e.g. chronic bronchitis and chronic obstructive pulmonary disease (COPD). The substance determined to be an activator or inhibitor of an ILM receptor, is useful for treating the diseases and for modulating an ILM receptor in a macrophage. The present sequence is an ILM receptor which is differentially expressed and which is involved in causing the induction and/or maintenance of the hyperactive status of macrophages involved in an inflammatory process of the control of the status of macrophages involved in an inflammatory process of the hyperactive status of macrophages involved in an inflammatory process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                  The present invention describes antigenic peptides (I) comprising: (a) CC any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino CC acids. Also described: (1) an assay for the detection of a particular GC and (2) an isolated antibody having high specificity and high affinity or CC avidity for a particular GPCR. (I) can be used as GPCR modulators and in CC antibody against a particular GPCR. (I) can be used as GPCR modulators and in CC antibody against a particular GPCR, and in the production of specific CC antibodies. The peptides and antibodies are also useful for detecting the CC presence or absence of corresponding GPCRs. The antigenic peptides for CC treating immune-related diseases, growth-related diseases, cell CC regeneration-related diseases, e.g. AIDS, Alzheimer's disease, CC diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease, CC atheroscierosis, bacterial, fungal, protozoan or viral infections, CC inflammation, allergies, Crohn's disease, diabetes, graft versus host CC disease, Parkinson's disease, multiple sclerosis, pain, psoriasis, CC anxiety, depression, schizophrenia, dementia, mental retardation, memory CC loss, epilepsy, asthma, tuberculosis, obesity, nausea, hypertension, CC any other disorder in which GPCRs are involved. The antibodies may be created in immunoassays and immunodiagnosis. ABZ42523 to ABZ42889 encode CC exemplification of the present inventor.
                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
           The invention relates to a method of screening for agents for treating formyl peptide receptor-like 1 (FPRLI)-related disorders in a mammal. The method involves detecting the binding of test compound to an FPRL1 polypeptide or polymucleotide, or determining the activity of an FPRL1 polypeptide at different concentrations of the test compound. FPRL1 is a grotein coupled receptor (GPCR) which is highly expressed in a variety of human tissues. It is expressed in varous brain tissues, cardiovascular system tissues, erythrocytes and other haemotological tissues, respiratory tissues, genito-unrological tissues such as prostate and placenta, and in various immune system tissues. In particular, it is expressed at a higher level in lungs affected with chronic obstructive pulmonary disease (COPD), compared with healthy lungs. The invention also encompasses a method of diagnosing an FPRL1-related disorder by quantification of FPRL1 polymucleotides, and pharmaceutical compositions for treating an FPRL1-related disorder. Therapeutic agents identified using the method of the invention can be used in the treatment of disorders such as haematological diseases, cardiovascular diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Golz
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GPCR; drug screening; diagnosis; haematological disease; cardiovascular disease, peripheral nervous system disease; central nervous system disease; respiratory disease; chronic obstructive pulmonary disease; COPD; asthma; genito-urological disease; inflammatory disease; neuroprotective;
                                                                                                                                                                                                                                                                                                                                                                                             Screening for therapeutic agents for treating a disease e.g., cardiovascular, inflammatory, or respiratory diseases by contacting a test compound with a FPRL1 polypeptide or polynucleotide and detecting binding of the test compound.
                                                                                                                                                                                                                                                                                                                                                           Disclosure;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              N-PSDB;

The current convergence represents a human G-protein coupled receptor protein related with vaccination.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 351
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 1; SEQ ID NO 1;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention comprises a method for screening for compounds which modify the binding or signal transmission of humanin-like peptide receptor protein (a G-protein coupled receptor). The method involves the use of human, rat or mouse FPRLI/FPRLI transmembrane G-protein coupled receptor. The compounds isolated by the method of the invention are useful for the treatment and prevention of nervous system disorders (e.g. Alzheimer's disease, Parkinson's disease, Down's syntome, Huntington's disease, muscular dystrophy, prion disease, Creutzfeldt-Jacob disease, diabetic neuropathy, multiple sclerosis, cerebral ischaemia, apoplexy, brain haemorrhage and subarachnoid haemorrhage). The present amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Screening compounds modifying binding of humanin-like peptide to its receptor protein for identification of apoptosis regulators and remedies for nervous system disorders, e.g. Alzheimer's disease.

Novel mammalian G protein coupled receptors, useful for identifying compounds that modulates diagnosing and treating disease condition associated with GPCR dysfunction e.g. autoimmune diseases, angina pectoris, Parkinson's disease.

Claim 151; SEQ ID NO 793; 542pp; English

The invention relates to human and mouse G protein-coupled receptors (GPCRs) and nucleic acids encoding them. The invention also relates to CC sequences at least 98 identical to the GPCR proteins and nucleic acids of the invention; methods of treating, preventing or diagnosing diseases associated with GPCRs of the invention; methods of screening for compounds useful in the treatment of GPCR-related diseases; a transgenic CC compounds useful in the transgene or in an endogenous GPCR gene; cells derived comprising a GPCR gene of the invention; a mouse comprising a transgenic mite; kits comprising several mice, each of which has a mutation in a different GPCR gene of the invention; and kits comprising probes which hybridise to GPCR polymuclectides of the invention. The invention further discloses variants of the GPCR polymeptides and vectors comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may be used in the diagnosis, treatment or prevention of a wide variety of diseases including neurological disorders (e.g., Alzheimer's disease, calarnoea, food poisoning or irritable bowell compression, diabetic neuropathy, parkinson's disease or schizophrenia); disorders of the colon or intestine (e.g., Crohn's disease, diarnoea; food poisoning or irritable bowell syndrome); cardiovascular disorders (e.g., angina, cardiac arrhythmia or myocardial infarction); muscular disorders (e.g., autoimune disorders (e.g., antended or leukaemia); immune disorders (e.g., autoimune disorders (e.g., obesity, enzyme deficiency-related diseases or vitamin deficiency-related corrects, but a town of the protect (e.g., cancers). The present sequence represents a GPCR of the colonic format directly from WIPO at the printed specification; those sequences not shown were obtained in celectronic format directly from WIPO at

The method is also useful in assessing the immune status of an individual. The methods are also useful in disgnosing and monitoring diseases that involve the immune system, e.g. rheumatoid arthritis, lupus, inflammatory bowel diseases, multiple sclerosis, HIV/AIDS or viral, bacterial or fungal infection. The present sequence represents a protein that is encoded by the mRNA of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        sequence identical or substantially similar to that of ADO57845 or ADO57865 with 13 or 15 amino acids, respectively, in which the N-terminal methionine is optionally formylated, its amide, ester or their salt. A peptide of the invention has antiasthmatic, antiallergic, antianflammatory, antiarteriosclerotic, neuroprotective, and immunomodulator activity. The receptor protein, its ligands, their encoded polynucleotides and antibodies are useful in the diagnosis of and screening drugs for e.g. asthma, allergic diseases, inflammations and screening drugs for e.g. asthma, allergic diseases, inflammations and arteriosclerosis. With these ligands, agonists and antagonists can be efficiently screened. An endogenous FPRLI (formyl peptide receptor-like 1) ligand P3 was purified from pig's stomach after extraction and chromatography for characterisation. Cloning of a rat spleen-originated FPRLI-encoded cDNA was also performed, and the clone was used in constructing an expression vector and other biotechnological manipulations as well as biological evaluation. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                              The present sequence is that of the human LXA4 receptor (ALX), a G-
protein coupled receptor (GPC). The invention is based, in part, on the
recognition that resolvin El receptor (Reso ERI) shares similar
structural features to LO-derived eicosanoid receptors such as the LXA4
receptor. A claimed method of identifying a receptor that mediates an
antinflammatory activity of a resolvin substance comprises: introducing a
nucleic acid configured to express a GPCR into a cell that does not
endogenously produce the GPCR; contacting the cell with a substance
comprising a resolvin; and detecting that the cell has a reduced cytokine
induced activation of a NF-kB transcription factor relative to a cell not
contacted by the substance. A claimed method for screening a candidate
substance for antiinflammatory activity comprises detecting that the
candidate substance alters an activity mediated by a GPCR. The GPCR
preferably has sequence identity within the second intracellular loop or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Screening candidate substance for anti-inflammatory activity, involves contacting cell expressing Reso E receptor with candidate substance, and detecting biological activity mediated by Reso E receptor.
